

CORPORATE PRESENTATION

MARCH, 2024

Disclaimer

This presentation has been prepared as of March 2024 (the “Presentation”) for information purposes only and does not constitute an offer or solicitation to sell shares or securities in Avanti Helium Corp. (“Avanti Helium” or the “Companies”) or any affiliated or associated company. This presentation does not purport to contain all of the information about the business of the Companies. None of the information or analyses presented are intended to form the basis for any investment decision, and no specific recommendations are intended. Accordingly, this Presentation does not constitute investment advice or counsel or solicitation for investment in any security. This Presentation does not constitute or form part of, and should not be construed as, any offer for sale or subscription of, or any invitation or offer to buy or subscribe for, any securities, nor should it or any part of it form the basis of, or be relied on in any connection with, any contract or commitment whatsoever. The Company expressly disclaims any and all responsibility for any direct or consequential loss or damage of any kind whatsoever arising directly or indirectly from: (i) reliance on any information contained herein, (ii) any error, omission or inaccuracy in any such information and (iii) any action resulting therefrom. Currency references are to Canadian Dollars (CAD \$) unless otherwise indicated. Certain information set forth in this Presentation contains “forward-looking information” and “forward-looking statements” under applicable securities laws. Except for statements of historical fact, information contained herein constitutes forward-looking statements and includes, but is not limited to, the (i) completion of, and the use of proceeds from the sale of shares being offered hereunder; (ii) the expected development of the Companies' business, projects and joint ventures, including the estimated timelines for achieving milestones in connection therewith; (iii) execution of the Companies' vision and growth strategy, including with respect to various jurisdictions in Canada and the United States; (iv) sources and availability of financing; and (v) identification of potential commercial and distribution partners. Forward-looking statements are provided to allow potential investors the opportunity to understand management's beliefs and opinions in respect of the future so that they may use such beliefs and opinions as one factor in evaluating an investment. These forward-looking statements are not guarantees of future performance and undue reliance should not be placed on them. Such forward-looking statements necessarily involve known and unknown risk and uncertainties, which may cause actual performance and financial results in future periods to differ materially from any projections of future performance or result expressed or implied by such forward-looking statements. Many of these risks are outside of the Company control and include, without limitation, risks associated with access to capital, reliance on key and qualified personnel, risks related commodity prices, risks relating to the inherent uncertainties and challenges present in forecasting market and industry outlooks, regulatory risks and uncertainties, risk relating to the ability of the Company to enter new markets in a timely manner. The information contained in this Presentation, is for discussion purposes only and for the exclusive use of those persons to whom it is transmitted by the Company, its directors, officer, and agents, and it is not to be reproduced or used, in whole or in part, for any other purpose whatsoever without the express prior written permission of the Company. No securities commission or similar regulatory authority has reviewed this Presentation. Although forward looking statements contained in this Presentation are based upon what management of the Company believes are reasonable assumptions, there can be no assurance that forward-looking statements will provide to be accurate, as actual results and future events could differ materially from those anticipated in such statements. Forward-looking statements contained in the Presentation are made using assumptions applicable as of the date of this presentation, and the Company undertakes no obligation to update forward-looking statements if circumstances or management's estimates or opinions should change except as required by applicable securities laws. The reader is cautioned not to place undue reliance on forward-looking statements.

Additional Information and Cautionary Statements on WNG 11-22

- (i) The Company's net interests in mineral lands vary from ~85% to ~75%.
- (ii) The resource is contingent on funding for development and production.
- (iii) There is uncertainty that the project will be commercially viable to produce any portion of the contingent resources.
- (iv) The estimates presented in this release are based on data and test results from one well. There is potential for future drilling activity to materially impact the estimated volumes based on additional geological data and production testing. Estimated pool volumes may increase or decrease in the future.
- (v) The contingent resources estimated for WNG 11-22 and offsetting locations relies on comparisons to analogous wells, and no production data is available from the well included in this estimate.
- (vi) The reader is cautioned that disclosure of helium in place volumes is not included in National Instrument 51-101 guidelines.

Information Regarding the Contingent Resources

The effective date of the contingent resource estimate is July 1, 2022 and was prepared in accordance with the COGE Handbook.

This news release discloses estimates of the Company's contingent resources. The Company defines contingent resources are those quantities of gas estimated, as of a given date, to be potentially recoverable from known accumulations using established technology or technology under development but which are not currently considered to be commercially recoverable due to one or more contingencies. There is uncertainty that it will be commercially viable to produce any portion of the resources.

The resource provides an estimate of raw gas. In April 2022, preliminary lab results showed the raw gas composition of the Cambrian zone at the WNG 11-22 well was 97.5% Nitrogen, 1.1% Helium, 1.1% Methane, 0.3% Co2 and trace amounts of other hydrocarbons.

The resource estimates presented above are subject to certain risks and uncertainties, including those associated with the drilling and completion of future wells, limited available geological, prices of the various raw gases and geophysical data and uncertainties regarding the actual production characteristics of the reservoirs, all of which have been assumed for the preparation of the resource estimates. The resources are classified as development. Contingent resources do not constitute, and should not be confused with, reserves. Contingent resources are defined as those quantities estimated, as of a given date, to be potentially recoverable from known accumulations using established technology or technology under development, but which are not currently considered to be commercially recoverable due to one or more contingencies. There is a range of uncertainty of estimated recoverable volumes. A low estimate (“1C”) is considered to be a conservative estimate of the quantity that will actually be recovered. It is likely that the actual remaining quantities recovered will exceed the low estimate, which under probabilistic methodology reflects at least a 90% confidence level. A best estimate (“2C”) is considered to be a realistic estimate of the quantity that will actually be recovered. It is equally likely that the actual remaining quantities recovered will be greater or less than the best estimate, which under probabilistic methodology reflects at least a 50% confidence level. A high estimate (“3C”) is considered to be an optimistic estimate. It is unlikely that the actual remaining quantities recovered will exceed the high estimate, which under probabilistic methodology reflects at least a 10% confidence level. There is uncertainty that it will be commercially viable to produce any portion of the resources.

All of the resources classified as contingent are considered to be discovered, and as such have been assigned a 100% chance of discovery, but have however been risked for the chance of development. The chance of development is defined as the likelihood of a project being commercially viable and development proceeding in a timely fashion. Determining the chance of development requires taking into consideration each contingency and quantifying the risks into an overall development risk factor at a project level.

Contingent resources can be subcategorized by project maturity status:

(i) Development Pending is where resolution of the final conditions for development is being actively pursued (high chance of development). Resources classified in this sub-category must be economic and have been assigned a chance of development ranging between 80% and 99%.

(ii) Development On Hold is where there is a reasonable chance of development, but there are major non-technical contingencies to be resolved that are usually beyond the control of the operator. Resources classified in this sub-category must be economic and have been assigned a chance of development ranging between 50% and 79%.

(iii) Development Unclassified is where the evaluation is incomplete due to the project being in an early stage of maturity and there is ongoing activity to resolve any risks or uncertainties. Resources classified in this sub-category can either be economic or sub-economic and have been assigned a chance of development ranging between 20% and 79%.

(iv) Development Not Viable is where no further data acquisition or evaluation is currently planned and hence there is a low chance of development. Resources classified in this sub-category can either be economic or sub-economic and have been assigned a chance of development ranging between 0% and 49%. Based on these definitions, all of the contingent resources disclosed in this news release are classified as Development Pending and are considered economic with either a high or reasonable likelihood of being commercially viable.

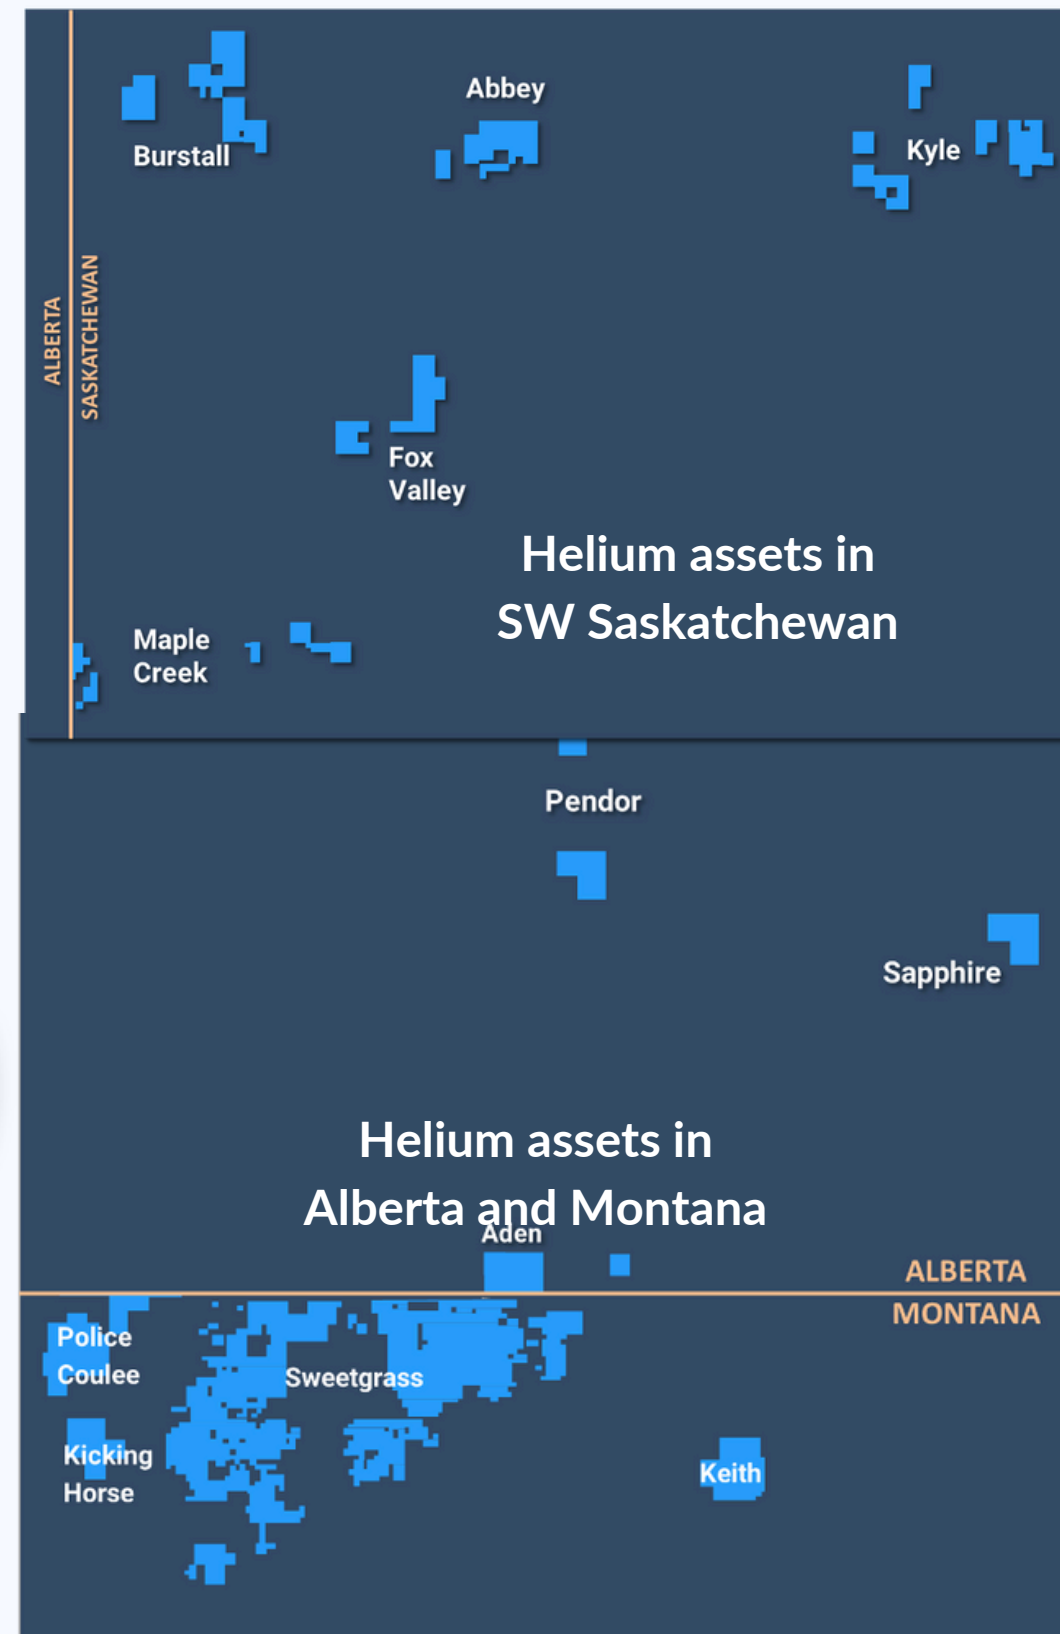

In general, contingencies which prevent contingent resources from being classified as reserves are grouped under three categories: economic contingencies, non-technical contingencies and technical contingencies. Economic contingencies are applicable only in the case of sub-economic contingent resources. As all of the contingent resources disclosed in this news release are classified as economic contingent resources, there are no economic contingencies in respect of such resources. Non-technical contingencies include factors such as required corporate or third party (such as joint venture partners) approvals, legal, environmental, political, social license and regulatory matters or a lack of infrastructure or markets. Technical contingencies are applicable where there is a technology currently under development that would be required to classify the contingent resources in question as reserves. None of Avanti's estimated contingent resources are subject to technical contingencies.

Estimates of economic contingent resources are based on existing access to infrastructure capacity and the current regulatory frameworks in which Avanti operates.

Avanti Helium is Focused on the Exploration, Development and Production of Helium Across Western Canada and the United States

 Avanti's Land

Strategic Evaluation

We employ a targeted approach and selection methodology to evaluate and prioritize multiple helium assets across Western Canada and the United States

Focused Acquisition

We focus on assets with highly prospective helium reservoirs and economic helium concentrations.

Diversified Portfolio

Our strategy is to diversify our helium assets, where each asset carries a different risk profile for helium exploration.

Our Process

- Avanti has built a proprietary geological model to understand helium migration and accumulation at a fundamental level.
- Approach and methodology are similar to that used to identify and access conventional plays.
- We have acquired several helium assets and proven production in our asset in Montana.
- Transitioning to split between development and exploration drilling.
- Targeting late Q3/Q4 2024 for on-stream helium production.

Exploration & Development

Development:

Greater Knappen

- Proved initial helium pool surrounding the WNG 11-22 well, in northwestern Montana.
- Published third-party preliminary resource estimate of 221 million cubic feet of helium in Sweetgrass Pool.
- Signed Midstream agreement with IACX for Helium Recovery Unit (HRU) to be built on the Sweetgrass pool.
- Sweetgrass pool helium production is targeted to be on stream late Q3 – early Q4 2024.

Exploration:

- Montana – licensed Keith 14-13 well in new pool SE of WNG 11-22.
- Alberta – licensed Aden 12-4 well in new pool across the border from WNG 11-22.
- Saskatchewan – purchased 2D seismic data over a known helium pool to use as a template for helium exploration.

Management & Technical Team

Chris Bakker, MBA CEO, DIRECTOR

Chris Bakker has over two decades of experience in oil and gas, most recently working as a commercial negotiator with Encana/ Ovintiv for significant facilities and pipelines in the Montney gas play. His expertise includes all facets of Natural Gas Exploration, such as land acquisition, exploration, drilling, well production, facility integration, and construction. Before Avanti, Mr. Bakker co-founded Terrelium Resources as a pure-play helium company. His educational background includes a Bachelor's and Master's in Economics and an MBA later in his career

Mike Leo INDEPENDENT DIRECTOR

Mr. Leo graduated in 2001 with a Bachelor of Human Kinetics and a Master of Human Kinetics in 2003 from the University of British Columbia. Mr. Leo qualified as a mortgage broker in 2013 and has been in corporate sales for over 13 years. Mr. Leo has been a director of a number of public companies since 2017, including Savanna Capital Corp. (TSX-V).

Rob Gamley PRESIDENT, DIRECTOR

Rob Gamley's career spans over a decade in corporate finance and consulting, providing corporate strategy and communications services to public companies across a broad range of industries including biotech, oil and gas and natural resource exploration and development. He has been a board member of several TSXV-listed companies and brings extensive capital markets experience and a considerable network of both retail and institutional contacts. Gamley graduated in 1998 with a Bachelor of Science from the University of British Columbia.

Greg Bronson INDEPENDENT DIRECTOR

Genga Nadaraju has over two decades of diverse professional experience in the oil and gas industry that includes asset exploitation, strategic planning, investor relations, and technical innovation. Her technical expertise spans both the conventional and unconventional oil and gas plays in Western Canadian Sedimentary Basin. Ms. Nadaraju brings strong project management and organizational skills with the ability to interact effectively with all stakeholders within the organization. She also has served as a board member for the Canadian Energy Geoscience Association (CEGA) from 2021-22.

Genga Nadaraju VP-SUBSURFACE, DIRECTOR

Genga Nadaraju has over two decades of diverse professional experience in the oil and gas industry that includes asset exploitation, strategic planning, investor relations, and technical innovation. Her technical expertise spans both the conventional and unconventional oil and gas plays in Western Canadian Sedimentary Basin. Ms. Nadaraju brings strong project management and organizational skills with the ability to interact effectively with all stakeholders within the organization. She also has served as a board member for the Canadian Energy Geoscience Association (CEGA) from 2021-22.

Cam Buss, P.Eng VP-OPERATIONS

Cam Buss is a professional engineer with 28 years' experience. Mr. Buss worked for Encana (now Ovintiv) for twenty-five years taking on roles up to Senior Manager in both upstream and midstream oil & gas. His broader experience includes O&G development, long range planning, infrastructure planning and design, production operations and completions engineering. He is driven by performance in meeting and exceeding targets and continually innovating. Mr. Buss attended the University of Alberta and received a bachelor's degree in chemical engineering.

Brad Paterson CFO

D. Brad Paterson has over 28 years' experience acting as a senior officer of listed companies. He has a thorough knowledge of management and financial accounting, corporate finance, crossboard transactions, corporate governance, and the regulatory markets. Mr. Paterson has earned a Bachelor of Arts in Economics and a Graduate Diploma in Management Accounting from the University of Alberta. In addition, Mr. Paterson has completed the Canadian Securities Course and has received the Chartered Professional Accountants and Certified Management Accountant designations.

DR. Jim Wood, PHD DIRECTOR - GEOSCIENCE

James Wood has over 30 years of experience as a geologist who specializes in reservoir characterization. His Geoscience and Petroleum Engineering research focus is on developing practical applications for enhanced evaluation and economic development of gas and liquid hydrocarbons in conventional and unconventional resource plays. Dr. Wood specializes in applied research in Geosciences and Petroleum Engineering; his research has received over 100 publications and has been cited over 1,300 times.

Management & Technical Team

Duane Jenkins

SENIOR RESERVES ENGINEER

Duane Jenkins is a professional engineer with over 30 years of diverse oil and gas experience. Mr. Jenkins possesses a broad range of experience in reservoir, exploitation, reserve and acquisition evaluations. Duane has a Bachelor's of Science degree in Chemical Engineering from the University of Calgary and is a member of APEGA and SPE.

Chad Lerner

DIRECTOR LAND & BUSINESS DEVELOPMENT

Chad Lerner has over 23 years of experience in many aspects of energy exploration. He has extensive experience in commercial agreements, joint ventures, business development and land acquisition strategy. His experience has focused on junior and emerging energy companies having been involved in both private and public energy entities. Mr. Lerner is a graduate (1998) of the University of Calgary, holding a Bachelor of Commerce Degree with a major in Petroleum Land Management.

Carter Chalmers

DIRECTOR MARKETING & CORPORATE DEVELOPMENT

Carter Chalmers is a senior business leader with over 15 years of experience in business development and corporate development, include marketing and investor relations across a wide range of mediums from mining, technology and oil and gas data solutions. He is experienced in all aspects of corporate development and investor relations for multiple start-ups and TSXV and CSE-listed companies. Prior to Avanti, Mr. Chalmers co-founded Terrelium Resources as a pure-play helium company.

Richard Balon P.Geoph

SENIOR GEOPHYSICIST

Richard Balon has over 30 years of experience in the Western Canadian Sedimentary Basin. He is a technically focused geophysicist with a proven track record working extensive analysis of 2D and 3D seismic data across some of the largest oil and gas fields in Canada. Mr. Balon holds a B.Sc. Geophysics from the University of Manitoba and is a member of APEGA (P.Geoph.), SEG, CSEG, CSPG.

Darrel Zacharias P.Geol

SENIOR GEOLOGIST

Darrel Zacharias has 29 years of technical and managerial experience in the Canadian energy industry. His knowledge of many play types comes from having generated, evaluated and drilled hundreds of prospects in the Western Canadian Sedimentary Basin during his career. He also has ten years of executive-level experience at publicly traded companies, including most recently as Vice President – Exploration at Chinook Energy Inc. Mr. Zacharias is a graduate of the University of Saskatchewan (B.Sc. Geology, 1993) and is a member of APEGA (P.Geol.).

Kevin Morrissette P.Geol

SENIOR GEOLOGIST

A professional geologist with over 18 years of diverse exploration, development, and operational experience across the Western Canadian Sedimentary Basin. Prior to joining Avanti Helium, Kevin was previously with Penn West Exploration and Gain Energy. Mr. Morrissette received his Bachelor of Science Degree from the University of Calgary and is a member in good standing of APEGA.

Helium Use Growth

MEDICAL INDUSTRY

Helium is mandatory for MRI machines which require 800 litres of Helium. Heliox mixtures in respiratory treatments.

CRYOGENICS

Helium is the only element that can come close to reaching absolute zero.

WWW

High Speed Internet, fibre optic cables must be manufactured in a pure helium environment

COMPUTERS

Helium filled hard drives offer 50% higher storage capacity with 23% lower operating power

SPACE EXPLORATION

Helium is critical for launching rockets into space, which is a \$500Bn a year industry

ELECTRONICS

Electronics & Semiconductors require helium to be used at different stages in the production process.

SAMSUNG
building a \$17Bn Semiconductor plant in the U.S. scheduled to open in 2024.

TSMC
Electronics & Semiconductors require helium to be used at different stages in the production process

Rising Demand & Geopolitical Risk To Supply

Supplies from Russia, Qatar, Algeria are more sensitive to geopolitical risks

U.S, Canada and Australia are expected to produce smaller share of the global helium supply, exposing the western world to helium dependence

1. Eight Capital and United States Geological Survey (USGS)

ALBERTA & MONTANA

Alberta & Montana

- ~78,000 acres of leases/licenses in Northwestern Montana and Southern Alberta.
- Initial exploration activities in Greater Knappen.
- Drilled and cased 3 wells.
- Two wells in Sweetgrass capable of total gas production of ~18,500 MMcf/d with 1.1% He.
- First Helium production in Q3/Q4, 2024
- With the success of the initial exploration wells, plans are in place to drill other mapped structures in the area.

Greater Knappen Overview

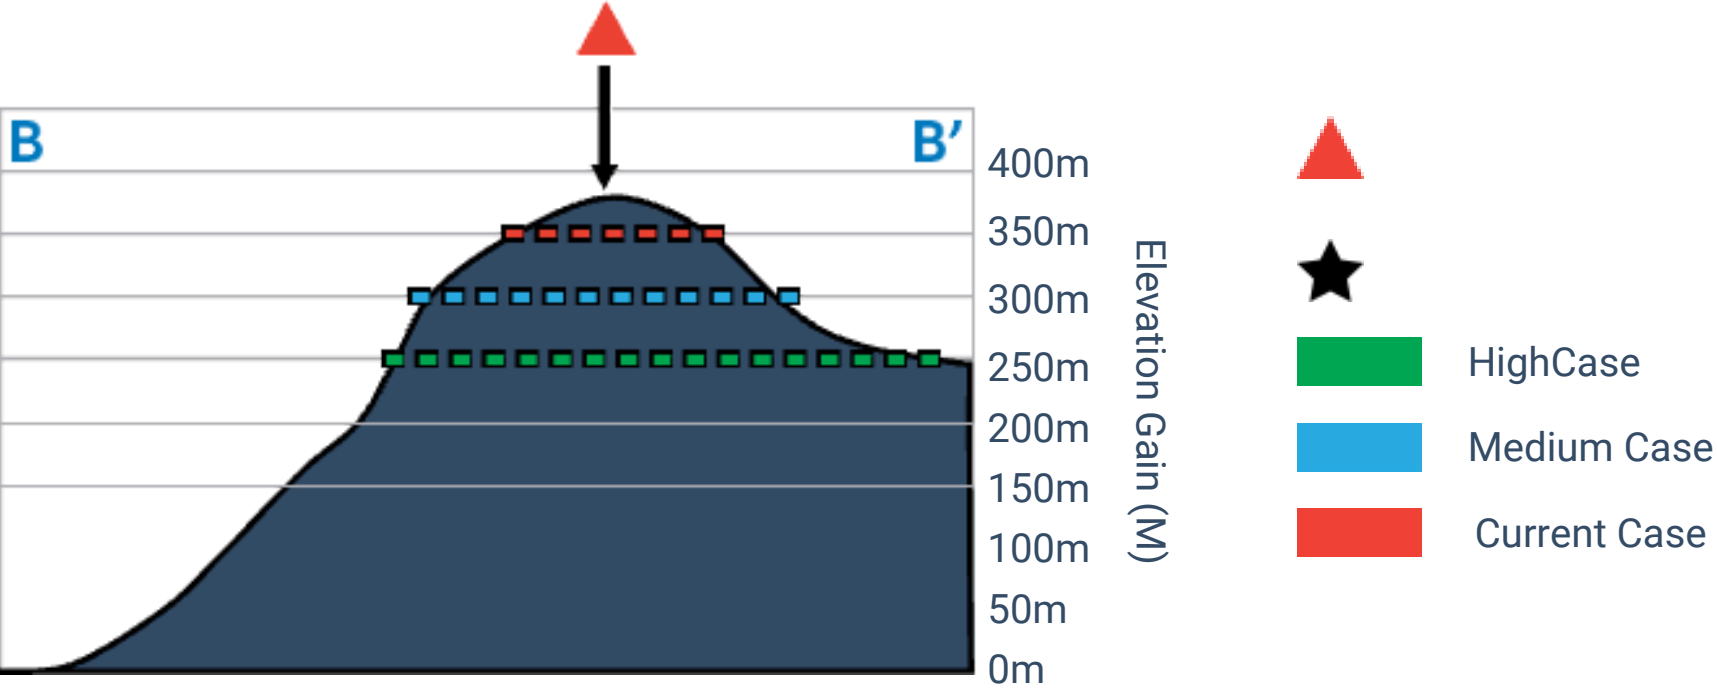

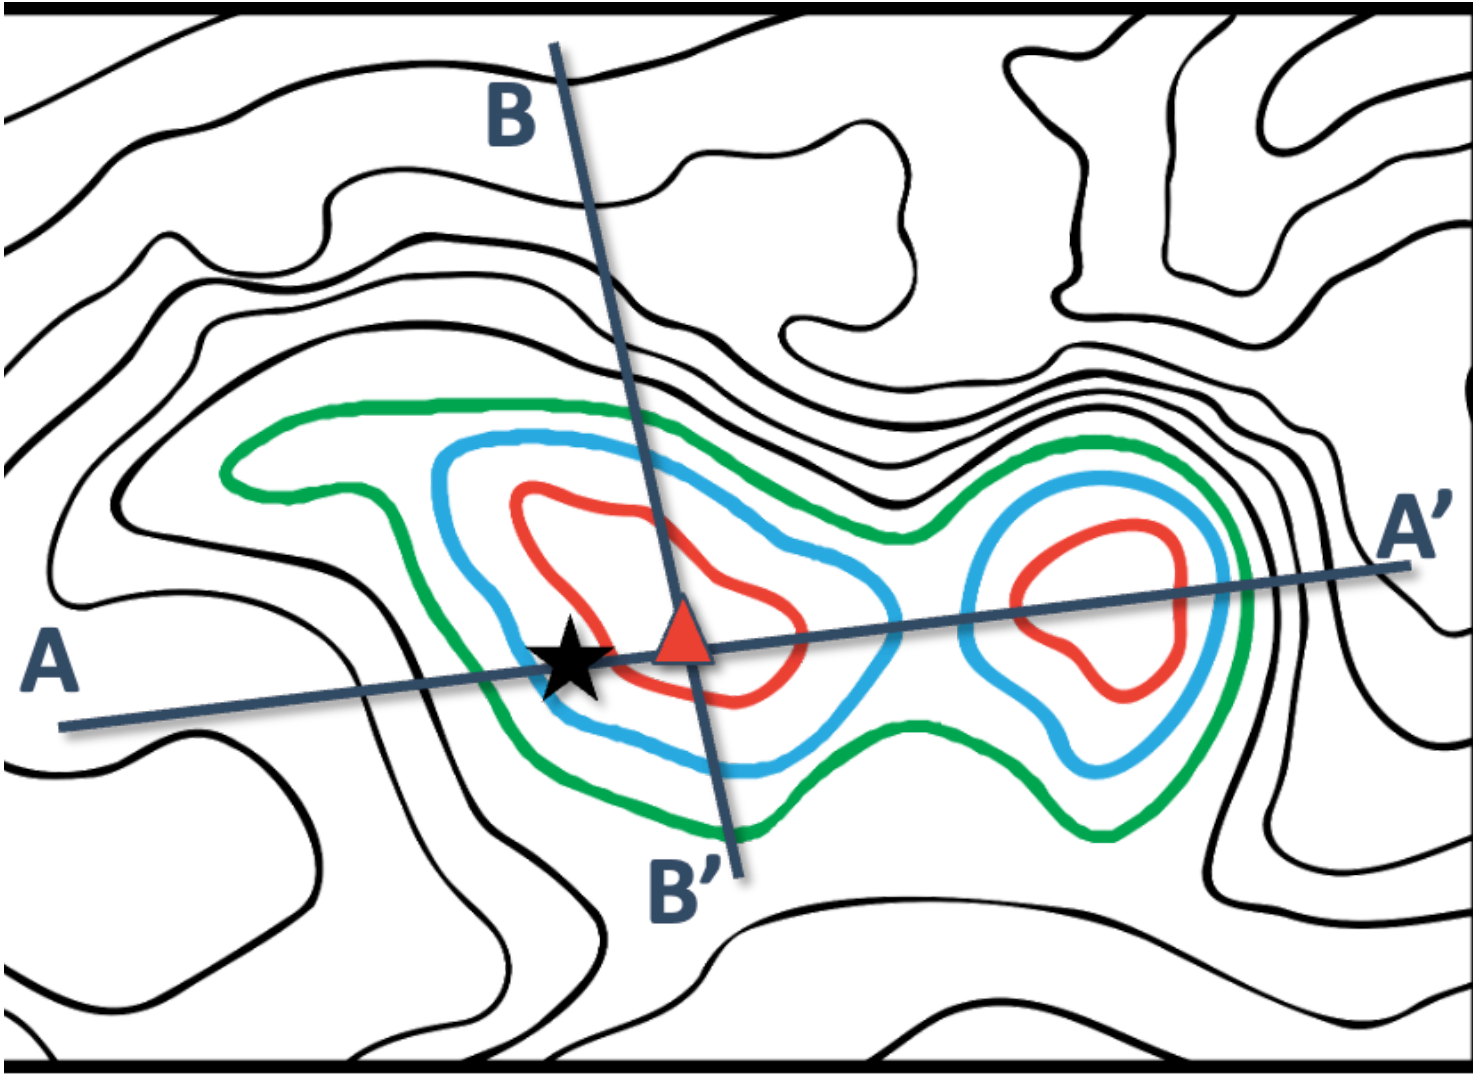

Avanti's WNG 10-21 Well during drilling in 2022

An area with proven helium production from multiple targets in the Cambrian and Devonian subsurface zones.

- ~74K Acres of Prospective Helium land
- 100% Operatoship
- 1%-2% Helium Content
- Pure Play with 97.5% Nitrogen

Sweetgrass Structure

- ▲ High Case
- ★ Medium Case
- ▲ Current Case

Sweetgrass Pool Overview

In January of 2023 McDaniel Associates prepared a Contingent and Prospective resources estimate for both the sweetgrass pool and Greater Knappen.

Canada US Border Between Alberta and Montana

Contingent Resources Contains Avanti's WNG 10-21 and 11-22 wells within the sweetgrass structure.

- Avanti's Land in Greater Knappen
- 📍 Prospective Resource

CONTINGENT RESOURCES					
	Gross Unrisked		Avg	Net Unrisked	
	Total Gas	Helium	WI	Total Gas	Helium
	Bcf	MMcf	%	Bcf	MMcf
Low	16	176	91	14	153
Medium	23	255	91	21	221
High	42	465	91	38	402

PROSPECTIVE RESOURCES					
	Gross Unrisked		Avg	Net Unrisked	
	Total Gas	Helium	WI	Total Gas	Helium
	Bcf	MMcf	%	Bcf	MMcf
Low	54	607	87.2	47	503
Medium	124	1,391	87.2	108	1,152
High	276	3,092	87.2	241	2,563

PROSPECTIVE + CONTINGENT RESOURCES					
	Gross Unrisked		Net Unrisked		
	Total Gas	Helium	Total Gas	Helium	
	Bcf	MMcf	Bcf	MMcf	
Low	70	783	62	656	
Medium	147	1,646	129	1,373	
High	318	3,557	279	2,965	

Notes:

1. Contingent resources are completed and consistent with March-23-2023 news release.
2. Prospective resources are preliminary with additional work to be completed:
 - o Current working interests are estimated based on lands acquired.
 - o There is no certainty that any portion of the prospective resources will be discovered. If discovered, there is no certainty that it will be economically viable or technically feasible to produce any portion of the resources.
 - o Prospective Helium resources are based off Sweetgrass discovery wells gas analysis mole percent

3. The Total is based on the arithmetic aggregation of all the prospects shown on the map above.
4. Volumes listed are full life volumes, prior to any cutoffs due to economics.
5. All reserve reports are as of January 31, 2023 effective date as per the McDaniel's & Associates independent reserves report.

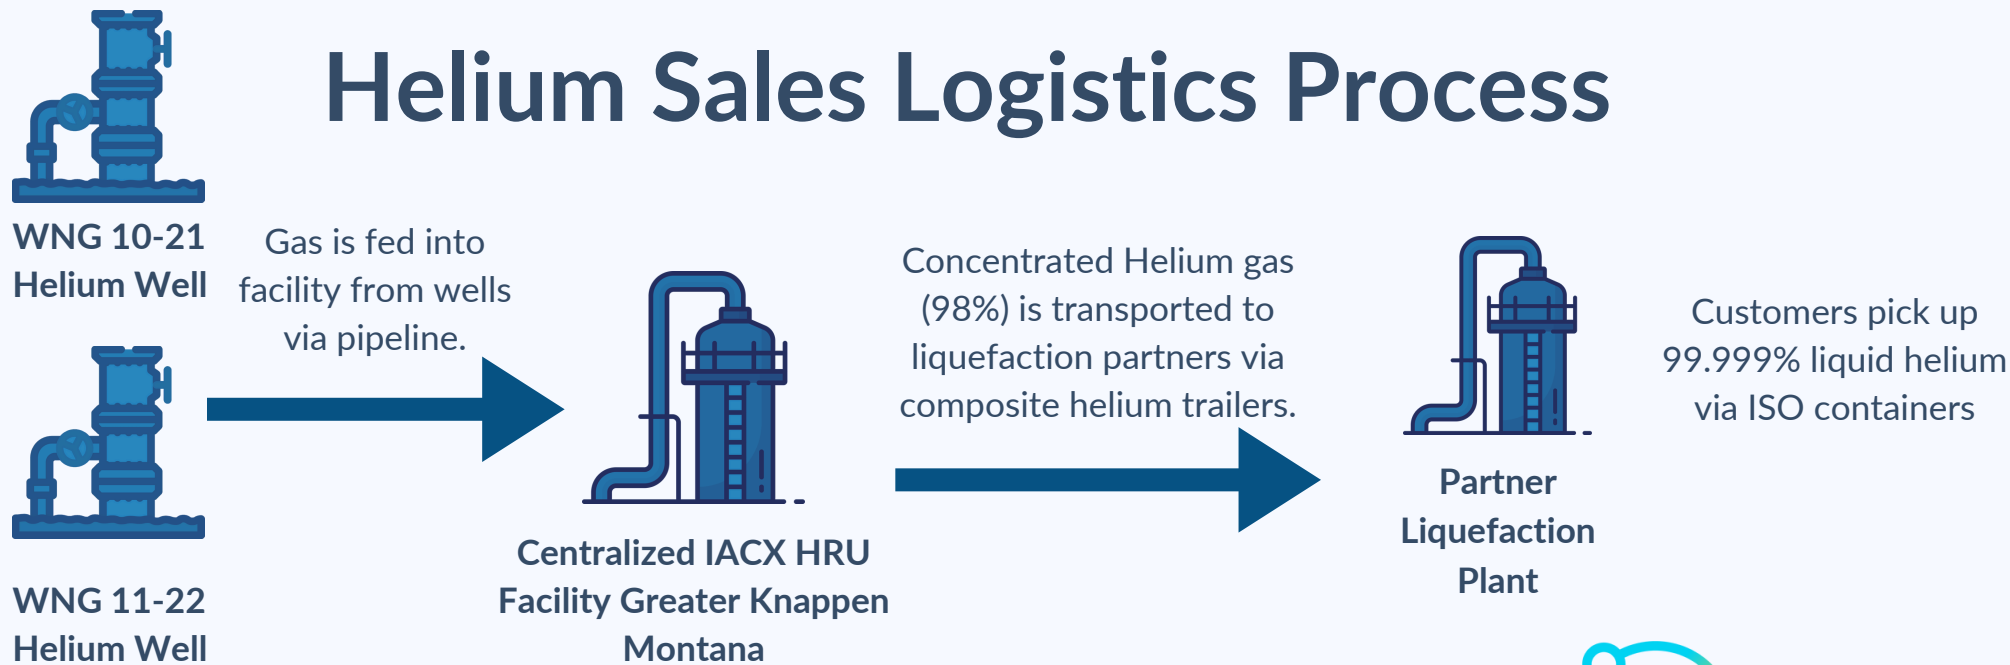

Sweetgrass Helium Production

In July 2023, Avanti signed a midstream agreement with IACX to build, fund, and operate a Helium Recovery Unit (HRU) at the Sweetgrass Pool in Greater Knappen, Montana.

The HRU plant is expected to come online in late Q3 / early Q4 2024 at 10 MMcf/d raw gas equating to ~22 liquid ISO's for the year. In January 2025 the plant will be expanded to 15 MMcf/d of raw gas equating to ~44 ISO's per year.

Helium Sales Logistics Process

In Q3 2023, Avanti started work on the ancillary components for the facility, including pipelines, powerlines inlet separators, compression.

Sweetgrass Pool Production Timeline

Commencing in Q2 / early Q3 2024, Avanti will have 99.999% liquid helium in production.

LEADER SASKATCHEWAN

SW Saskatchewan

- Avanti acquired the Saskatchewan helium permits in 2022 based on the Company’s detailed geological models and technical assessment.
- Avanti’s acreage is now surrounded by other helium company land holdings, and by mid 2022 most of the prospective acreage in the SK helium fairway was tied up.
- Saskatchewan is a favorable jurisdiction for helium prospecting.
- The government of Saskatchewan released its Helium Action Plan, which provides policy and program commitments to support and grow the entire helium value chain. The provincial government has also expanded the Saskatchewan Petroleum Innovation Incentive (SPII) to include helium projects (Nov 15, 2021, Gov’t. Of Saskatchewan news release).

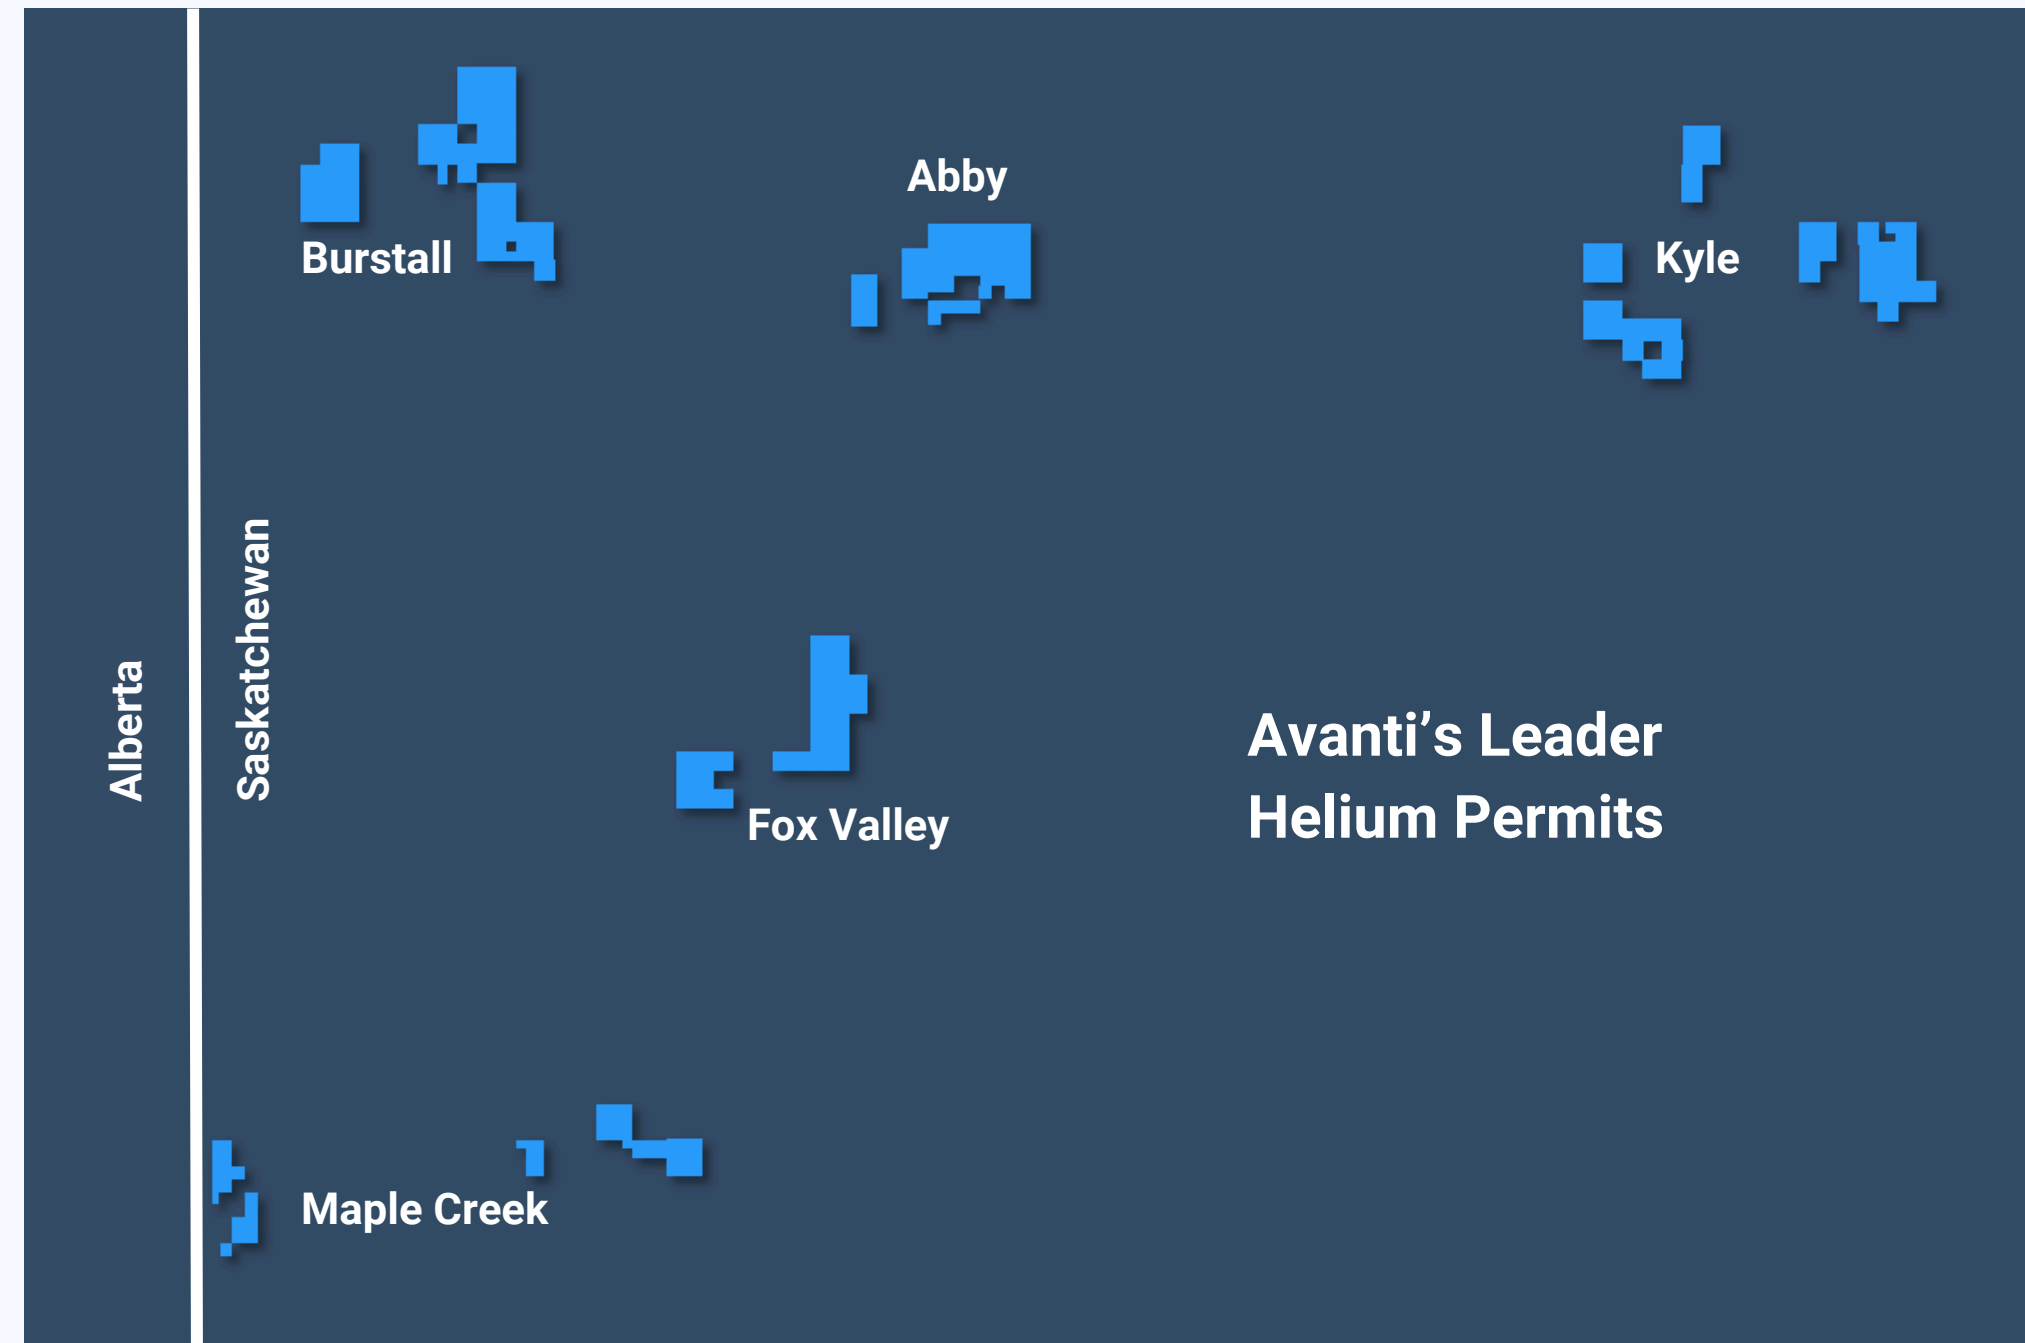

SK Leader Prospect Permits

~91K Acres of Prospective Helium land

100% Operatorship

~1% Helium Content

- The permit areas are named according to the strike area; Maple Ridge, Fox Valley, Burstall, Abby and Kyle.
- Avanti's helium permits were selected strategically rather than using large scale blanket land postings.
- Avanti has purchased trade 2D seismic data over a known helium pool to use as a template for successful helium exploration in this region.
- The next step is to acquire trade seismic data over our permits to advance the prospects and select future drilling locations

Thank You

Demand Constituents Of Helium USA

Source: US Geological Survey, Cormark Securities Inc.

Where is Helium Found?

- Helium is found by drilling wells, similar to natural gas. It is formed from radioactive decay of heavy elements like Uranium and Thorium.
- Helium can be trapped deep under hard non-porous rock where it cannot escape. Gravity can't trap helium from escaping the atmosphere.
- Our focus is on helium-bearing non-hydrocarbon sources in Western Canada and Montana.
- Once helium is found it is purified by Cryogenic, Membrane or Pressure Swing Adsorption processes that can produce ultra-pure helium

Why Helium?

Helium is the second most abundant element in the universe but extremely rare on earth. As a noble gas, Helium is not combustible. It has properties that make it irreplaceable for industrial applications like fibre optic cables, data centres, semiconductor manufacturing, medicine / MRI machines, cooling & cryogenics. Avanti is focused on developing large-scale projects to extract Helium deposits trapped within the earth.

- 100 times more valuable than Natural gas Natural Gas \$3-\$6 per Mcf Helium \$600-\$800+per Mcf.
- Global shortage, it's estimated the supply will not keep up with the demand for the next 20 years.
- Canada has large reserves in the world. A handful of producers are extracting helium in Saskatchewan.
- Industry demand CAGR of 11% each year through 2037.

He
Helium

Helium Generation And Trapping Model

1. Helium is generated by the decay of uranium and thorium in the basement rocks.
2. Once released from the source rock, helium can interact with formation water.
3. Formation water carries the dissolved gases as it ascends.
4. When the water contacts a pre-existing gas cap (containing methane or carbon dioxide), Helium partitions out into the gas cap.
5. Helium concentration varies going up the stratigraphic rock column.

Modified from On The Hunt for Helium, Physics World (2017)

U.S. Helium Production

The US is the world's largest producer, accounting for roughly 40% of supply. However, the US National Helium Reserve in Amarillo, Texas, the world's single largest source of helium for the past 70 years, is now exhausted. Where will the replacement helium come from?

In January 2024 the BLM is set to auction off all remaining Helium Reserves, as well as the assets in Amarillo. BLM's exit from the market will eliminate the current price ceiling.

Canada is estimated to have the 5th largest Helium reserves in the world, and they are virtually untapped.

FUELING THE HIGH TECH FUTURE

THE REACTOR OF THE FUTURE

Superconducting coils are cooled with helium and are used everywhere strong magnetic fields are needed. Wendelstein 7-X, the world's largest stellarator device which is used to evaluate the main components of a fusion power plant, uses helium for cooling.

HELIUM COOLING PARTICLE ACCELERATORS

At the European Organization for Nuclear Research (CERN), liquid helium also plays a central role. It is cooling the superconducting magnets that keep particles on their track. CERN operates the biggest "refrigerator" in the world

WORLD'S LARGEST DILUTION REFRIGERATOR

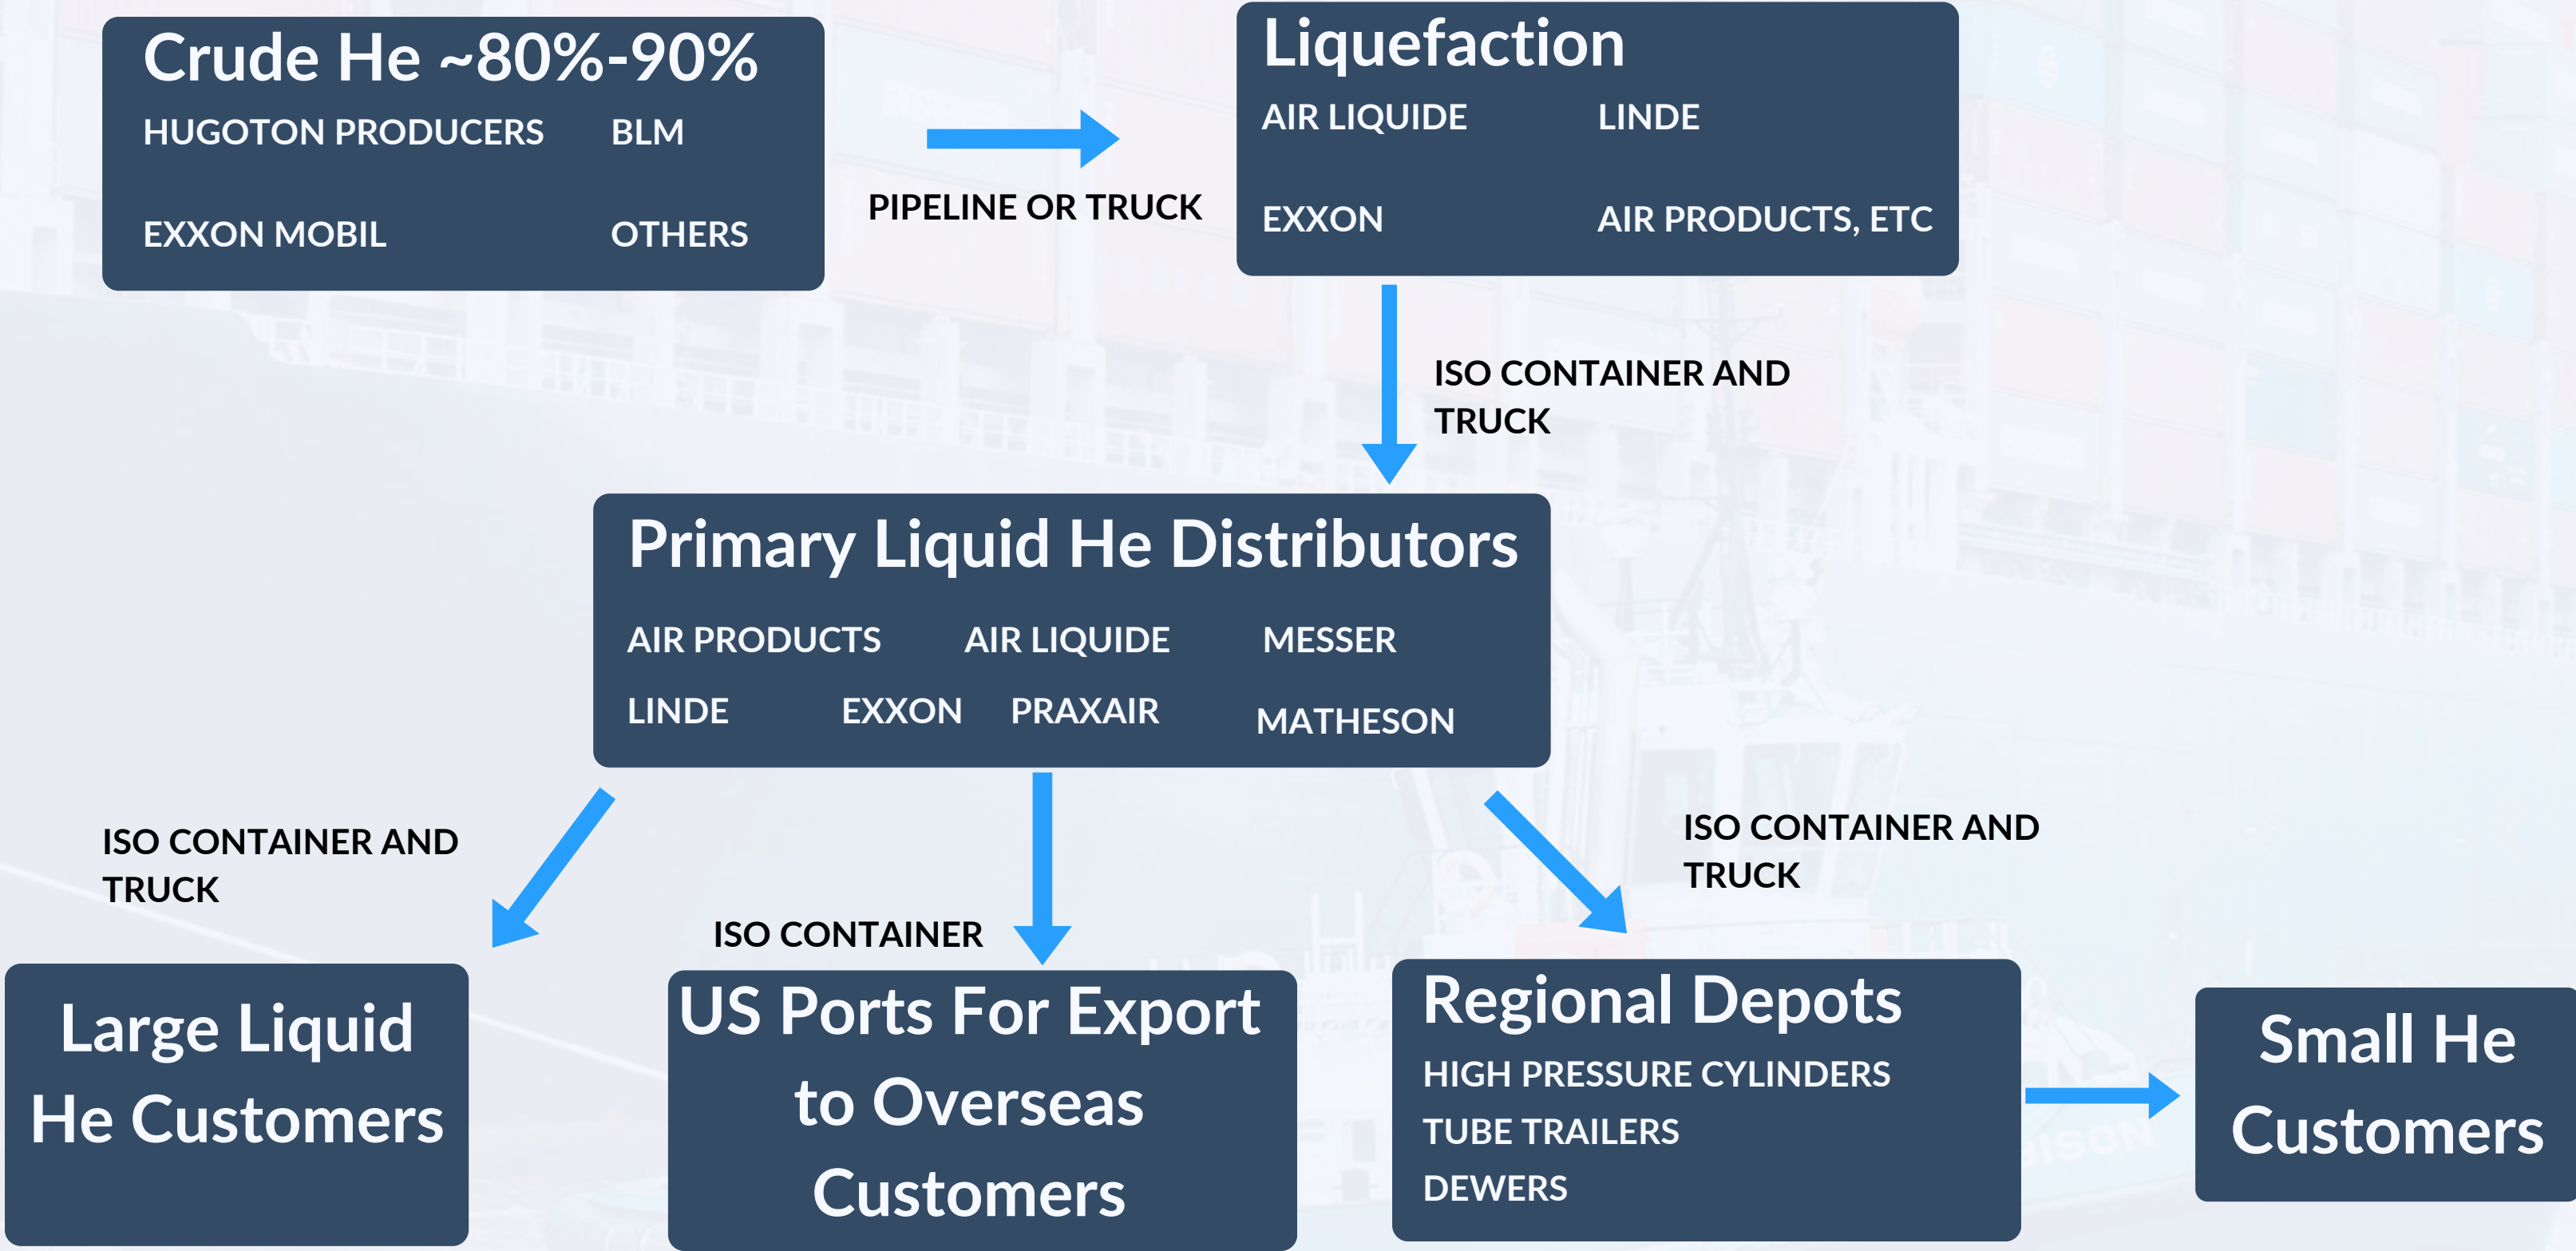

Quantum computing relies on incredibly low temperatures. Goldeneye is IBM's internal codename for the world's largest dilution refrigerator, which will house a future 1,000,000 qubit quantum processor.

FIBRE OPTIC CABLE MANUFACTURING

After fiber-optic glass is drawn into fine strands, it is shielded with helium while the cladding is applied to prevent the newly formed glass surface from reacting with the contaminants present in ambient air.

Commercial Grades Of Helium

Grade	Purity	Description
Grade 6	99.9999%	Used in the manufacturing of semiconductor chips and for scientific research, MRI machines and for gas chromatography. Derived through liquifaction process.
Grade 5.5	99.9995%	Like Grade 6 helium, it is generally considered "research grade". Similar uses as Grade 6 helium but additionally used in welding and as a cooling gas in fiber optics.
Grade 5	99.999%	Laboratory uses such as gas chromatography, mass spectrometry and also used for weather balloons and blimps.
Grade 4.8	99.998%	Highest use of industrial grade of helium (similar uses as below).
Grade 4.7	99.997%	Grade-A Helium, most often used for cryogenics and pressurizing/purging along with atmosphere control, welding, in breathing mixtures and leak detection.
Grade 4.6	99.996%	Used for weather balloons, blimps, leak detection, welding and coolant for rockets.
Grade 4.5	99.995%	Commonly used in the balloon industry and in certain MRI applications.
Grade 4	99.99% & Lower	Considered balloon grade helium.
